ASH award earned at conference
Congratulations to Madeleine Turcotte, MS who earned an American Immunotherapy treatment shows effectiveness for glioblastoma
Society of Hematology Achievement Award at the recent national conference in Atlanta for her abstract about personalized therapy design for ETP-ALL using computational biology modeling with in vitro validation.

Glioblastoma is an aggressive, stubborn brain tumor with low odds of survival for patients. Now, University of Florida Health researchers have found a way to target a molecule that lets the tumor grow, migrate and evade the body’s immune system. Read more here.
